Congratulations on your purchase of your new
SOLAR LANTERN from

terra® friendly

Embrace Yourself. Embrace Our Planet.

Your new FLOATING POOL LIGHT is easy to use:

To inflate:

Pull the inflating nozzle to the out position for ease of inflation. Remove cap of nozzle, and blow air in carefully while depressing the base of the nozzle to open the flow valve into the lantern. Inflate to desired level, being careful not to over inflate (think of this as a water floatie.)

To power on:

Just simply press the power button (located in the center of the solar panel):

Press once for LOW setting.

Press again (twice) for HIGH setting.

Press a third time for FLASHING mode.

Press one more time to POWER OFF.

Notice:

1. When charging, please be sure to put it in sunlight - with solar panel facing the sun - for roughly 8 hours to obtain a full charge.

2. Please remember to squeeze the base of the inflating nozzle for easier inflating and deflating. DO NOT FORCE AIR OUT!!! PVC WILL RUPTURE!

PRECAUTIONS:

1. The Terra Friendly Solar light is intended to bring you visible light to otherwise darker areas of your world.

Although it is inflatable and waterproof, the TF Solar Light is **not intended for prolonged (months of) exposure to extreme conditions such as high (100 degrees or more) heat, or water in the interior of the pvc air chamber, or extreme pressure, or sharp objects.**

2. **Please do not use this as a flotation device**, as it was not intended or constructed to withstand prolonged (more than 20 seconds occasionally) submergence underwater.

3. **Do not stand on the TF Solar Light**. It will break. Do not hit or smash it. It will break.

4. **PVC shell is NOT PUNCTURE PROOF**, and is subject to suffering puncture wounds from sharp objects, or high pressure against even dull objects.

Violation of any of these precautions may void your warranty.

TAKE CARE OF YOUR TERRA FRIENDLY SOLAR LIGHT…

AND IT WILL TAKE CARE OF YOU. ☺

APPLICATIONS:

* Outdoor living and activities (camping, hiking, hunting, fishing, backyards, parties, pools, hot tubs, swimming, etc.);

* Emergency situations (roadside assistance, blackouts, flood and other disaster rescue, etc.) GREAT IN BUG-OUT-BAGS!!! ;

* For Giving and Sharing with others. A little bit of light can make such a big difference in all our lives, especially if we lack resources or opportunities for obtaining the simplest of needs – such as light to live by.

FEATURES:

1. Solar-powered and inflatable with battery level LED indicators
2. Waterproof PVC enclosure suits all weather conditions for short bursts!
3. Loop at both top and bottom side for easy hanging/use applications
4. Inflating nozzle; easy to inflate and fold after deflated

5. Button switch control: low/bright/flashing light modes
6. Flashing-light setting for emergency situations
7. Highly efficient built-in solar panel board
8. Charge under direct sunlight or incandescent light
9. Charge time of 8 hours yields a minimum of 6-12 hours of light
10. Ten white light emitting diodes (LED's) with 4000 mcd light source
11. Deliver up to 90 lumens providing 15 sq. ft. of light
12. Rechargeable lithium polymer battery pack: 300-500 cycle life
13. Retains 50% of charge for 2 years if inactive
14. There are no further costs associated with lighting –

NO BATTERIES to BUY - EVER!

Please,

ENJOY your new solar lighting.
